Response to Amendment

The following is in response to the amendment filed on March 22, 2004.

Allowable Subject Matter

Claims 17-30 are allowed.

The following is an examiner's statement of reasons for allowance:

The claimed method for cooling a hot drawn fiber in a heat exchanger having a cap assembly is allowed, because the method comprises at least the steps of collecting a cooling gas in the cap assembly, and withdrawing a gaseous exhaust stream comprising the cooling gas and at least one gaseous impurity from the cap assembly by means of a gas pumping means. In prior art methods, exhaust cooling gas and impurities are removed directly from heat exchanger (if removed at all), and the cap assembly serves as a buffer zone to prevent escape and/or contamination of cooling gas that is within the heat exchanger.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Response to Arguments

Applicant's arguments filed March 22, 2004 have been fully considered and are persuasive. The references relied upon previously, Roba (WO 99/26891) and Darcangelo (EP 0 079 186) do not disclose collecting and exhaust cooling gas in a cap assembly and withdrawing the gas from the cap assembly, and therefore do not teach or suggest the claimed method. Roba, in particular Figure 6, explicitly shows that exhaust gas is removed from within the heat exchanger.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

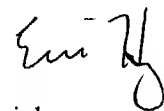

Darcangelo et al (US 4,514,205) discloses a fiber cooling apparatus having a cooling tube and an iris diaphragm with nitrogen gas at one end to prevent contamination by air into the cooling tube.
